

TRUCKWORKS FIRE TRUCKS

Engineered for the way you work.

»»»» Get the big city fire truck you need for your small town.

We know how much effort a volunteer fire department puts into procuring the right fire truck. Government grants are time consuming to apply for and hard to get. So it's important that when you do secure one, the truck you purchase will last a decade or more.

Maybe you want your truck built to suit the needs of your location, region or size. Maybe you want it to come equipped with the specific components you prefer. Or maybe you want it to feature the latest technology and the most user-friendly customizations. At TruckWorks, we've designed trucks that feature the efficiencies you need, from spare tire carriers between the tank and the cab to multiple hoses that can be used at the same time and on either or both sides of the truck.

»»»» Your job is to serve and protect. So is ours.

When your equipment is designed to give you the upper hand, it allows you to focus on the emergency at hand. Need a single-axle fire tender that pumps 750 gallons of water without giving up room for storage? Check. Rapid loading and unloading capabilities that don't sacrifice stability for a safe water delivery? You got it.

[FIRE TRUCKS]

Igniting your passion for service and superior craftsmanship.

A fire tender that helps you do your job better—and is engineered to last for years. That's the TruckWorks promise. All of our fire apparatuses are in compliance with, and often exceed, National Fire Protection Association (NFPA) regulations. We offer mild steel, stainless steel and aluminum fire tenders in tank capacities from 500 to 3,500 gallons. Over the last 20 years, we've built a variety of fire tankers in an array of design configurations that complement all levels of station operations.

[WILDLAND BRUSH TRUCKS]

Stays on the job for off-road

Starting from a new or used chassis, we build your brush truck from the ground up with any water pump and hose reel you need installed. Equipment for our brush truck (also known as "type 6" tenders) is best used on small off-road support vehicles that are deployed in rural areas, typically in fire grounds where a larger tanker or pumper can't fit. Whether you're looking to add extra tool storage or suit up with heavy-duty tanker components, we'll build a truck that deserves its spot on the frontline.

Want even longer life from your steel tank?

We offer "hot-dipped Galvanized" tanks that are unsurpassed in longevity. These fully-constructed tanks are dipped in molten zinc to ensure corrosion resistance and create unmatched durability. The result? Your galvanized steel tank is protected from deterioration inside and out and will last as long as your chassis.

TruckWorks pulls its weight.

Owning a truck with every component engineered for the way you work can significantly increase productivity and make daily use easy. By designing and optimizing our truck tanks with advanced engineering software, we build in safety features like a low center of gravity and a superior interior baffling system with side-to-side supports. These safety features keep the tank and its contents secure and reduce the potential for unsafe and unstable driving conditions. We also use advanced simulation and stress analysis techniques to thoroughly evaluate the integrity of our tank designs and eliminate the risk of structural failures in even the most extreme operating conditions. Concerned about compliance with Federal Bridge Laws? We make sure every truck tank is designed with the proper weight distribution to pass all weigh station inspections.

At TruckWorks, we know that designing the best tank on the market is only half the battle. That's why we always use the highest-quality materials and manufacturing techniques to build our tanks. TruckWorks tanks are designed and built to be the longest-lasting, most durable tanks on the market.

Doing our part to help you find the right parts.

Nothing is more important than feeling confident about your fire apparatus. Should a breakdown occur, getting your truck back in service quickly is our priority. To maximize efficiency and minimize downtime, we offer a wide range of truck parts for purchase online, as well as through multiple dealers across the country.

Connect with us to address all aspects of your next fire truck purchase—budget constraints, equipment requirements, regulations and lifecycle—and we'll help you design the truck you need.

Fire Truck Features and Options:

- 1,000- to 1,800-gallon single-axle capacities available
- 2,000- to 3,500-gallon tandem-axle capacities available
- Available in mild steel, stainless steel & aluminum
- Exclusive hot-dip galvanized tanks and epoxy-lined options available
- Available pump options include Hale, Darley and Waterous, and Berkeley
- Custom monitors and hose reels, and Kwik dump options available
- Code 3, Whelen, Tomar, SoundOff Signal, and Federal Signal lighting packages
- Custom manufactured toolboxes in steel, stainless steel, and aluminum
- Custom control panels in your choice of finish
- FoI-Da-Tank under-tank storage standard
- Multiple rack and toolbox basket storage options
- Foam agent injection systems

Not seeing an option you'd like? Contact us and we'll get you what you need.
