

TRUCKWORKS VACUUM TRUCKS

Engineered for the way you work.

>>>> Get the dirt on the easiest way to load wet and dry material.

TruckWorks' vacuum trucks are designed around the functionalities required by your business operations. Maybe you're looking for a septic truck to remove waste for event or construction sites? Or a pumper truck to clean out grease traps? Or perhaps you require an industrial truck to clear out water collection basins? We have everything you need to transfer liquid and sludge waste for appropriate waste disposal.

Choose only the equipment you want—pressure washers, hoses, multiple compartments, roll-off units and more—for use with our 1,000- to 5,000-gallon capacity tanks. Proper equipment installation can increase the efficiency of your operations and the overall value of your work. By installing the proper sized hoses and appropriate storage compartments to keep hoses smooth, we can increase the speed and enhance the performance of your vacuum job.

[VACUUM TRUCKS]

Eliminating inefficiency that can suck the energy out of you.

Giving you the ability to purchase a truck to your exact specifications sets us apart from our competitors. So does our unique engineering approach. Using advanced engineering software, we design trucks that can overcome common worksite challenges such as emptying sludge ponds or cleaning out storage tanks. Engineering also ensures equalized weight distribution is maintained between the front and rear axle, and weight compliance with Federal bridge laws.

TruckWorks' vacuum trucks feature full rear-opening, high-lift doors for easy dumping of high solids materials, such as grease and human waste. Plus, hydraulically operated vibrators make disposal quick and easy.

Septic Waste Vacuum Truck

This truck is designed to meet the requirements of customers providing waste collection services at large events, construction sites, and areas not yet developed. Septic waste vacuum trucks also can carry portable restrooms for delivery or replacement at construction sites. They're generally built on a single-axle chassis because they need to maneuver easily in confined spaces.

Pumper Vacuum Truck

Our pumper vacuum truck is designed to meet the needs of customers engaged in clean-up activities associated with large environmental spills, carwash pit cleanouts, sludge removals, grease trap cleanouts, and hazardous materials removal. These trucks are built on a tandem-axle chassis due to the heavy volumes they carry to disposal sites.

TruckWorks pulls its weight.

Owning a truck with every component engineered for the way you work can significantly increase productivity and make daily use easy. By designing and optimizing our truck tanks with advanced engineering software, we build in safety features like a low center of gravity and a superior interior baffling system with side-to-side supports. These safety features keep the tank and its contents secure and reduce the potential for unsafe and unstable driving conditions. We also use advanced simulation and stress analysis techniques to thoroughly evaluate the integrity of our tank designs and eliminate the risk of structural failures in even the most extreme operating conditions. Concerned about compliance with Federal Bridge Laws? We make sure every truck tank is designed with the proper weight distribution to pass all weigh station inspections.

At TruckWorks, we know that designing the best tank on the market is only half the battle. That's why we always use the highest-quality materials and manufacturing techniques to build our tanks. TruckWorks tanks are designed and built to be the longest-lasting, most durable tanks on the market.

Doing our part to help you find the right parts.

Nothing is more important than feeling confident about your vacuum truck. Should a breakdown occur, getting your truck back in service quickly is our priority. To maximize efficiency and minimize downtime, we offer a wide range of truck parts for purchase online, as well as through multiple dealers across the country.

Connect with us to address all aspects of your next vacuum truck purchase—budget constraints, equipment requirements, regulations and lifecycle—and we'll help you design the truck you need.

Vacuum Truck Features and Options:

- Tanks capacities ranging from 500- to 5,000-gallons
- Available in mild steel, stainless steel, or aluminum
- Full length hose trays, work lights and toolbox standard
- Multiple custom compartments
- Roll-off units available
- Pump options include Jurop, Fruitland, and Masport
- Hydraulically operated tank lift
- Hydraulically operated rear door & vibrator
- Wash down tanks & gas-powered pressure washer
- Heavy-duty rear toilet rack with back support

Not seeing an option you'd like? Contact us and we'll get you what you need.
