

TRUCKWORKS WASTE OIL TRUCKS

Engineered for the way you work.

A slick solution for easy waste oil recovery.

TruckWorks sets the industry standard for waste oil recovery trucks. Hundreds of our trucks are on the road today nationwide, and we're continuously implementing new designs to help operators work smarter—not harder. We offer an array of configurations, tank capacities and pumping systems to design a truck that meets your most exacting specifications.

Your waste oil truck should operate smoothly, without compromising safety. Whether you're traveling through rough terrain, transporting thousands of gallons of reclaimed fluids or in a region with extremely hot weather conditions, we'll engineer your truck to handle the challenges you face in the field.

[WASTE OIL TANKERS]

Safely collect, transfer and recycle oil and sludge wastewater materials.

You're looking for a smooth transition of used oil disposal from start to finish. Look into TruckWorks' oil reclamation trucks. Working from a new or used chassis, we design and fabricate your truck from the ground up, aligning every pump, storage tank and tanker equipment option with your operational needs in mind.

Whether you're looking for a simple upgrade in tool storage space or a larger modification such as increasing tank capacity, we offer a diverse product line to help you construct a hard-working truck. And we strategically engineer it to overcome the common challenges oil reclamation trucks face—proficient waste separation processing from sumps, pits and traps, and making a smooth retrieval of oil across on- or off-road conditions.

Get more efficient waste oil collection, without draining your energy.

You know how frustrating it is to get to a job site and not have the tools you need. TruckWorks' waste oil trucks offer an all-in-one solution. They carry new or used products in one tank, such as oil, antifreeze and dirty water. And they offer multiple storage compartments in mild steel, stainless steel, or aluminum. A double bulkhead between tanks eliminates the potential for contamination.

Need help deciding which truck is right for you? We provide expert guidance to help you select the best vehicle for your needs. Choose from a diverse range of features, from our top waste oil pumps and distribution system options to storage compartments for hoses and hose tubes and lighting options. Trucks also feature lift gates that can carry moveable barrels or totes. Built-in ladders and platforms on tanks also promote operator safety and provide fall protection.

TruckWorks pulls its weight.

Owning a truck with every component engineered for the way you work can significantly increase productivity and make daily use easy. By designing and optimizing our truck tanks with advanced engineering software, we build in safety features like a low center of gravity and a superior interior baffling system with side-to-side supports. These safety features keep the tank and its contents secure and reduce the potential for unsafe and unstable driving conditions. We also use advanced simulation and stress analysis techniques to thoroughly evaluate the integrity of our tank designs and eliminate the risk of structural failures in even the most extreme operating conditions. Concerned about compliance with Federal Bridge Laws? We make sure every truck tank is designed with the proper weight distribution to pass all weigh station inspections.

At TruckWorks, we know that designing the best tank on the market is only half the battle. That's why we always use the highest-quality materials and manufacturing techniques to build our tanks. TruckWorks tanks are designed and built to be the longest-lasting, most durable tanks on the market.

Doing our part to help you find the right parts.

Nothing is more important than feeling confident about your waste oil truck. Should a breakdown occur, getting your truck back in service quickly is our priority. To maximize efficiency and minimize downtime, we offer a wide range of truck parts for purchase online, as well as through multiple dealers across the country.
